JBLE FLOWERING COSMOS—WAR TIME RABBIT

The double flowering cosmos are rticularly large and beautiful this seen. The flowers vary considerin their degree of doubleness being absolutely double, while others have a frill or collar surround-ing the double disc, resembling colte dahlias; they are beautiful in ther form. The plants have someheavier, less out foliage than ie single flower type, so the fact that hey will produce double flowers can determined when the plants are So far only one other color, de nink, is offered.

There is an extra large, early owering single cosmos producing owers from 3% to 4% inches in come into bloom ut sixty days from the time of wing, two months before the late wering varieties.

The late flowering cosmos are ofd in white, crimson, pink and yel-

The seeds should be sown in the n ground in the spring when danof frost has passed, or they may started under cover and transted. In northern New Jersey the ants come up every season alf sown seeds, indicating that the eds might safely be sown in the

When the plants are about a foot the tops should be pinched out induce a bushy growth. Set the santa 18 inches apart. They prefer light, not too rich soil, but do well

Outdoor hutches need sloping roofs and overhanging eaves. It is because of the fact that rabbits can be fed largely on hay and other

is indirectly secured when the ant as food and are finding rabbit meat the present incipient boom. Among sponsible to a considerable extent for the newer kinds special attention is being given to the black Siberian hares. or as they are called by some breeders, Canadian Black Giants. These animals are not true hares any more than is the Belgian hare, so called. Hares are distinctly different from rabbits. The young are born with the eyes open and are active from the first, while rabbits are blind and helpless for some time. It is hard to say how this misnomer came to be accepted but rabbits prob-ably will go on masquerading under the name of bares indefinitely.

There is considerable confusion about the origin of the black Siberian. It seems to have appeared first in Canada, and the claim is made that it was introduced by a Russian immigrant some years ago. However, a number of breeders express the opinion that it is simply a black Plemish giant, and that similar rabbits have been produced among Flemish glants bred by them. At any rate, there seems to be no good reason for calling this rabbit the Canadian hare, as some people are urging.

Whatever its antecedents, the black Siberian seems to have an extraordinarily thick, heavy coat. The skin should have considerable value for fur making. A black Siberian pelt shown at one of the eastern shows recently was almost as thick as a dogskin. There is a growing demand for rabbit skins in this country. They are needed by furriers and hatmakers. Formerly nearly all of the rabbit hair used in making hats came from abroad. Now this source has dried up, and there seems to be no reason why American grown rabbits should not keep the hatters supplied. In making hats the hair is removed, so that the quality of the pelt is of little importance. But in preparing furs a good pelt is impera-

years on the Pacific coast. Then there are the rabbits formerly the feasibility of raising rabbits on a called German checkered giants, but large scale to help meet the world's which are now being rechristened food shortage. In some places rabrather unusual looking animals, because of their variegated coloring. They have a black butterfly on their noses similar to a characteristic marking of the English rabbits.

All these newer breeds are being sold at high prices because of their scarcity. Many people, however, always want the unusual, so that these rabbits are in great demand. It is urged in their favor that they will provide a much larger amount of meat and bigger pelts than the Belgian hare or common rabbit. All of them are prolific and easy to raise. If the war continues much longer it is probable that growing rabbits for meat will get to be an established occupation. E. I. FARRINGTON.
